

ExaGrid Disk-Based Backup and EMC NetWorker

DATA SHEET

Gartner

ExaGrid Named "Visionary" in the 2015 Magic Quadrant for Disk Backup with Deduplication Appliances

Computer Technology Review Awards ExaGrid "Most Valuable Product (MVP) Award – 2015"

ExaGrid Receives Network Computing "Return on Investment Award – 2015"

"Best-in-Class" Disk Backup Solution in Under \$50k and "Recommended" in Under \$100k
2014 Buyer's Guide Reports

ExaGrid Wins "Disk Based Product of the Year: Small/Mid-range - 2014"

InfoWorld.com Awards ExaGrid "Technology of the Year - 2013"

ExaGrid and EMC NetWorker: Simple, Quick and Cost-Effective Disk-Based Backup and Recovery

Efficient disk-based backup requires close integration between the backup software and the disk device. That is the advantage delivered by the partnership between EMC and ExaGrid. Together, EMC and ExaGrid provide a cost-effective disk-based backup solution that scales to meet the needs of demanding enterprise environments.

EMC NetWorker users may be surprised how quickly they can have their first backup running on the ExaGrid. Many ExaGrid customers take only a few seconds to configure and are fully operational within 30 minutes.

Scalability That Meets Your Business Needs without Costly "Forklift" Upgrades

With ExaGrid's grid-based architecture, each appliance in the system brings with it not only additional disk, but also additional memory, bandwidth, and processing power – all the elements needed to maintain high backup performance. This keeps your backup window short as your data grows, as growth is accommodated by simply adding additional appliances to the grid. There is no need to replace less powerful appliances with more powerful ones – no forklift upgrades – you simply add more appliances to the grid. You get the shortest possible backup times with the ability to easily keep those times short as your data grows over time.

Faster, More Reliable Backups and Restores

Moving from tape to a disk-based backup appliance from ExaGrid can significantly reduce backup times, helping customers stay within their backup window and avoiding the hassles and delays of backing up to tape. Restores are also much faster and easier, as ExaGrid's post-processing architecture keeps the most recent backup intact in non-deduplicated form, ready to be rapidly restored when needed.

You can also eliminate offsite tapes by having a copy of your backups offsite on disk using data deduplication to efficiently transfer the data. Achieve faster and more reliable recoveries in the event of primary backup failure or other type of disaster with minimal bandwidth utilized because only the changes traverse the WAN.

Easy to Install, Use, and Manage

With the combination of EMC and ExaGrid disk-based backup, you can eliminate the management hassles of tape and also avoid expensive, complex VTL-based solutions. The ExaGrid appliance fits easily into your backup environment behind your existing EMC backup server. Simply plug in the ExaGrid behind your backup server and point your EMC backups to the ExaGrid appliance via a NAS (CIFS or NFS) share, and you are ready to begin executing backups. Once installed, backup management is made simple with ExaGrid's intuitive management interface and reporting capabilities.

ExaGrid and EMC NetWorker

Getting Started

It's a simple four-step process to point backups from EMC NetWorker to the ExaGrid "plug-and-play" disk-based backup system:

Step 1: Turn It On

It's a simple four-step process to point backups from EMC NetWorker to the ExaGrid "plug-and-play" disk-based backup system:

Step 2: Point and Click to Create a Share

Using its simple web interface, create the shares on the ExaGrid system for EMC NetWorker. No installation or configuration process required.

Step 3: Define Shares

Using EMC NetWorker, you can easily define an ExaGrid share as an Advanced File Device (adv_file).

Step 4: Redirect Backup Jobs

Using EMC NetWorker, simply point the existing backup job(s) to the ExaGrid system's target share.

That's it for most installations. You may also choose to do

additional organization of backups since the ExaGrid system is easily customized to fit your backup and business processes.

Complementary EMC NetWorker Backup Features

EMC NetWorker provides a complete, flexible and integrated backup and recovery solution for Windows, NetWare, Linux and UNIX environments. For large datacenters or individual departments, EMC NetWorker protects and helps ensure the availability of all critical applications and data. It features the highest levels of hardware support for even the largest devices, innovative support for disk technologies, storage area network (SAN) and network attached storage (NAS) environments and reliable protection of enterprise class databases and messaging systems.
